

You're in, welcome fellow hacker! This handbook covers setup, docs, example repos, AI skills for your coding assistant, and the submission checklist: everything between the acceptance email and a submitted project.

Kickoff walkthrough

<https://youtu.be/JQ2iwl0-PHA>

Important Dates

- 16 July, Applications close
- 17 July, 09:00 CET - Problem statement revealed and build window opens
- 23 July, Midnight AoE - Build window closes and submissions are due
- 29 July, Winners announced

All code must be written inside the build window. Plan, sketch, and read docs beforehand as much as you like.

What you're building

A chat agent that changes how people interact with information. Trigger.dev handles orchestration and background jobs; ClickHouse powers the real-time data layer. Meaningful use of both is required, and it's worth 25% of your score.

Theme: Beyond the Wall of Text

Every chat agent gives you the same thing: a wall of text. Ask about your data and you get paragraphs, bullet points, maybe a markdown table if you're lucky. It's a terrible way to understand anything. But chat doesn't have to be text. A response can be a chart, a map, a diagram, an interactive component you can explore.

Build a chat agent powered by Trigger.dev + ClickHouse where the response itself is the product: visual, interactive, explorable. If your agent's best answer is a paragraph, you've missed the brief.

1. **Should I cycle tomorrow?** — weather + air quality fused into an hour-by-hour visual of your commute window with a single verdict, not a forecast dump..

2. **Ask my logs anything** — point it at your app's logs and metrics, ask “why was Tuesday slow?”, get back rendered flame graphs, error-rate heatmaps, and a highlighted trace of the actual culprit — not 200 lines of grep output. .

Judging lens: ratio of insight to words. Text is the garnish, not the meal.

Day One: Setup

1. **Claim your credits.**
 - a. **ClickHouse:** New accounts get \$400 in credits - [redeem credits](#).
 - b. **Trigger.dev:** New accounts get \$100 of one-off credits (as well as the \$5/month on the free plan) - [redeem credits](#).
2. **Spin up ClickHouse Cloud** and create a service. The [quickstart](#) gets you querying in minutes.
3. **Create a Trigger.dev project** and deploy a hello-world task via the [quickstart](#).
4. **Bring them together**, the [ClickHouse JS client](#) works inside Trigger.dev tasks out of the box.

Skills for your AI coding assistant

AI assistants (Claude, Cursor, Copilot, ChatGPT) are permitted and encouraged. Both platforms ship official Agent Skills that make your assistant much better at writing correct code:

- **ClickHouse skills:** schema design, query optimization, ingestion patterns. Install with `npx skills add clickhouse/agent-skills`. [Repo](#) · [Announcement](#)
- **Trigger.dev skills:** task patterns, best practices, works across Claude Code, Cursor, Windsurf and more. [Changelog + install](#)

Documentation

ClickHouse

- [Docs home](#)
- [AI/MCP guides](#): connect agents to ClickHouse via the MCP server
- [mcp-clickhouse](#): the official MCP server
- [SQL Playground](#): public datasets to prototype against before your own data lands

Trigger.dev

- [Docs home](#)
- [AI agents guides](#): prompt chaining, routing, parallelization, orchestrator patterns, plus Realtime streaming to your frontend
- [GitHub](#)

Example repos & inspiration

- [ClickHouse/examples](#): MCP agent examples with LangChain, LlamaIndex, DSPy, and more
- [Building effective AI agents with Trigger.dev](#): the core agent patterns, with runnable code
- [AgentHouse demo](#): a live chat-with-your-data experience backed by ClickHouse MCP (the demo itself is at llm.clickhouse.com, Google login required)
- [Integrating with ClickHouse MCP](#): five framework integrations, walked through

How you'll be judged

- **Use of ClickHouse & Trigger.dev**: 25%
- **Problem fit**: 20%
- **Technical implementation**: 20%
- **Innovation**: 20%
- **Scalability & impact**: 10%
- **Presentation**: 5%

A jury of 10–15 judges scores every submission. Note the bonus category: **best OLTP + OLAP integration** has its own prize.

Submission checklist

- ☐ Public GitHub repo (or accessible cloud environment)
- ☐ Demo video on YouTube (**5 minutes max**)
- ☐ Meaningful use of both ClickHouse and Trigger.dev
- ☐ All code written during the build window
- ☐ Submitted under your team captain (teams of up to 5)

How to submit

Fill in [this form](#), and you boom, we have your submission.

Getting help during the week

- Join the [ClickHouse Slack](#), or
- Join the [Trigger.dev Discord](#)

Prizes

- 🏆 **Grand prize:** Ultimate desk setup bundle (iMac, iPad Air, AirPods Max, Apple Watch accessories) + 2K ClickHouse Cloud credits + Trigger.dev credits
- 🥈 **Runner-up:** Dev bundle (MacBook Air, AirPods Pro, accessories) + 1K ClickHouse Cloud credits + Trigger.dev credits
- ⭐ **Bonus: best OLTP + OLAP integration:** Lego set of your choice + 500 ClickHouse Cloud credits + Trigger.dev credits
- 🎉 **Social raffle:** co-branded swag box, open to all registered participants

Total pool: €10,000.

Quick rules recap

Professional developers, 18+, based in the US, Canada, UK, or an EU country. Solo or teams up to 5, one captain per team. ClickHouse and Trigger.dev employees can't enter. AI coding assistants are explicitly allowed.

Questions? Full details at triggerdev.clickhouse.com.

Good luck! Now go build. 🚀
